

**D12-V (SWL 300KG)**

## NFK HIGH PERFORMANCE **VACUUM RIGS** GERMAN ENGINEERED AND MANUFACTURED BY KAPPEL

The D-12V is a combination of a vacuum pump with power supply (battery including charger) and a vacuum cross arm. This vacuum cross arm is intended for flexible use on construction sites, anywhere where no 220 to 240 volt connection is available.

Using the D-12V, the transported goods can be rotated 360 degrees.

The D-12V is hung on a crane hook and is supplied with energy via the installed battery. In addition to easy installation on a crane or similar device, the D-12V also offers the safety advantage of that in general no vacuum supply hose or voltage supply line is required as is the case with separated devices (cross arm, vacuum pump). In addition, it is also possible to lower transported goods during a power outage with this type of device as long as the vacuum circuit is perfectly sealed, because the vacuum reserve tank is located on the vacuum cross arm.

<b>Min Glass Size</b>	Dependent on lifting requirements
<b>Max Glass Size</b>	1500mm x 2500mm Approx. (on main frame)
<b>Lift Capacity</b>	300kg
<b>Total Rig Weight</b>	25kg
<b>Rig Size</b>	800mm (Width) x 270mm (Depth)
<b>Rotation Manual</b>	360° Rotation - Manual
